Terms of use <https://www.reoentapps.com/terms-of-use>Privacy Politics: 23/12/2020 Phiên bản 3.0.7 I love the way music looks here. The bass is great. I also appreciate how, although some services are paid, it offers a lifetime subscription. The only things that are missing from this app are the ability to mix the right playlist from the first song, and the ability to fade songs until the song goes smoothly. I've been using this app for music that I can't add to iTunes, and eq can't be used in it. It's really a good app, with good sound, but, my biggest struggle with this, is the fact that it skips a song in the middle, without me pressing anything or clicking on anything. Sometimes, my phone will be on my desk and the song will turn randomly. The second thing is the fact that with some songs, EQ is very weak and doesn't make a big difference at all. However, for the majority, the EQ looks great and very versatile. I just wish you could do more with EQ. Otherwise, this app is really good and I recommend everyone to try it. I've been using these apps for almost two years and it's been a good update until the update, since the app update has been acting weird there's actually one problem with this app and this problem is every time you try to go on the audio settings it kicks you the entire app. You've given this app 5 stars because it actually uses to enhance your size and bass but now when you try to go to settings to enhance your size or just the sound in general it kicks you. I hope to fix this bug because this app is really good it's just taken this one problem that happens and now boom app is total garbage.
